```
PT   Diagnosing endometrial cancer comprises determining expression of nucleic
PT   acid molecules or expression products that are differentially expressed
PT   in normal and malignant endometrium.
XX
PS   Claim 33; Page 214-217; 233pp; English.
XX
CC   The invention relates to diagnosing endometrial cancer in a subject
CC   suspected of having endometrial cancer comprising determining the
CC   expression of a set of nucleic acid molecules or expression products in
CC   an endometrial sample suspected of being cancerous, where the set of
CC   nucleic acid molecules comprises at least 2 nucleic acid molecules
CC   selected from 50 fully defined sequences as given in the specification.
CC   The nucleic acids are used as an array of at least 2 of the 50 nucleic
CC   acids bound to a solid substrate. Also included is a solid-phase protein
CC   microarray comprising at least 2 antibodies or its antigen binding
CC   fragments, that specifically bind at least 2 different polypeptides from
CC   the 50 fully defined sequences as given in the specification, fixed to a
CC   solid substrate. The methods and arrays are useful for the diagnosis of
CC   endometrial cancer, selecting and monitoring treatment regimes and
CC   identification of lead compounds useful for the treatment of endometrial
CC   cancer. The present sequence is one of 50 proteins differentially
CC   expressed between cancerous and non-cancerous samples

PT   New polypeptide for treating or preventing diseases associated with an
PT   abnormal platelet-derived growth factor (PDGF) level, e.g. cell
PT   proliferative or fibrotic diseases, comprises a portion of a PDGF-alpha
PT   or -beta.
XX
PS   Claim 1; Page 38-41; 127pp; English.
XX
CC   The invention describes a polypeptide comprising a portion of the
CC   receptor tyrosine kinase platelet-derived growth factor alpha receptor
CC   (PDGFalphaR). The polypeptide and the polynucleotide are useful in
CC   treating or preventing diseases and conditions associated with an
CC   abnormal PDGF level or response, such as cell proliferation, cell
CC   migration, extracellular matrix synthesis and secretion or cell
CC   contraction. Exemplary diseases or disorders include cell proliferative
CC   diseases (e.g. cancer, psoriasis) or fibrotic diseases (e.g.
CC   atherosclerosis, liver cirrhosis, pulmonary fibrosis, kidney fibrosis,
CC   scleroderma, keloids, hypertrophic scars, skin wound healing or
CC   proliferative vitreoretinopathy). The method may be used in identifying
CC   compounds for treating or preventing the development of diseases
CC   involving cell contraction, e.g. fibrotic diseases. This is the amino
CC   acid sequence of human platelet derived growth factor receptor (PDGFR)
CC   alpha used to make mutant PDGFR alpha proteins for use in treating
CC   fibrotic diseases

PT   New baculovirus having a modified genome encoding a therapeutic agent,
PT   useful in the manufacture of a medicament for the treatment of cancer,
PT   particularly prostate cancer.
XX
PS   Claim 33; Page; 34pp; English.
XX
CC   The present invention describes a humanised baculovirus (I) which
CC   comprises a modified baculovirus genome having a nucleic acid molecule
CC   encoding a therapeutic agent and a polypeptide which functions to target
CC   the baculovirus to at least one cell type. Also described is a
CC   pharmaceutical composition comprising (I). (I) has cytostatic activity,
CC   and can be used in gene therapy. The baculovirus is useful in the
CC   manufacture of a medicament for the treatment of cancer, particularly
CC   prostate cancer. The present sequence represents the human platelet-
CC   derived growth factor receptor alpha protein, which is specified in the
CC   exemplification of the present invention. N.B. The present sequence is
CC   not given in the specification but is referred to in Claim 33 as Genbank
CC   accession number NM_006206

PT   Treating a vascular condition, e.g. myocardial infarction,
PT   atherosclerosis, ischemia, congestive heart failure, hypertension,
PT   stroke, thrombosis, arrhythmia or tachycardia, by administering
PT   endothelial precursor cells.
XX
PS   Claim 24; Page 47; 110pp; English.
XX
CC   The present invention relates to a method of treating a vascular
CC   condition in a mammal, which comprises administering to the mammal a
CC   therapeutic amount of endothelial precursor cells. The method and cells
CC   of the invention are useful for treating a vascular condition, e.g.
CC   myocardial infarction, atherosclerosis, ischaemia, tachycardia,
CC   congestive heart failure, peripheral vasculature disorder, hypertension,
CC   stroke, thrombosis, arrhythmia or tachycardia. The present sequence is a
CC   protein shown in the exemplification of the invention

PT   Identifying ligand binding to inactive conformation of target protein
PT   kinase (T) comprises contacting the conformation modified (T) which
PT   contains reactive group at binding site, with ligands and detecting
PT   kinase-ligand conjugate formation.
XX
PS   Disclosure; SEQ ID NO 50; 260pp; English.
XX
```

```
CC   The present invention relates to a method for identifying a ligand (L),
CC   which binds to an inactive conformation of target protein kinase (T). The
CC   method involves contacting inactive conformation of (T), which contains
CC   or is modified to contain a reactive group at or near a binding site of
CC   interest, with one or more ligand candidates capable of covalently
CC   bonding to the reactive group thus forming a kinase-(L) conjugate (C).
CC   The method is useful for identifying protein kinase inhibitors that
CC   preferentially bind to inactive conformation of a target protein kinase.
CC   The present sequence is a protein kinase which may be modified via an
CC   amino acid substitution, for use in the method of the invention.

PT   Hepatic fibrosis disease markers comprising polynucleotides or
PT   antibodies, useful for improved diagnosis, screening and developing drugs
PT   to treat hepatitis, to control cirrhosis and carcinoma.
XX
PS   Claim 3; SEQ ID NO 358; 313pp; Japanese.
XX
CC   The present invention relates to hepatic-fibrosis disease markers
CC   (ADF90539-ADF90871) and related proteins (ADF90872-ADF90917). The
CC   sequences are useful for detecting and treating hepatic fibrosis caused
CC   by alcohol consumption, virus infection, etc., and the associated chronic
CC   hepatitis, etc. leading to liver cirrhosis and hepatic carcinoma. The
CC   markers allow the cause of hepatic fibrosis to be clarified (diagnostic
CC   precision), so more suitable treatments can be developed and given.

PT   New isolated variant platelet derived growth factor alpha (PDGFRA)
PT   polypeptide, useful for screening for a compound useful in influencing
PT   PDGFRA-mediated neoplasia in a mammal.
XX
PS   Example 1; SEQ ID NO 2; 302pp; English.
XX
CC   The invention relates to a novel isolated variant platelet derived growth
CC   factor receptor alpha (PDGFRA) polypeptide. The polypeptide of the
CC   invention is a type III receptor tyrosine kinase (RTK) and may be useful
CC   for screening for a compound that may influence PDGFRA-mediated neoplasia
CC   in a mammal. The current sequence is that of the human PDGFRA wild-type
CC   protein of the invention.

XX
PT   Early detection of soft tissue sarcoma comprises determining expression
PT   of a gene in a first soft tissue sample and a normal soft tissue sample
PT   and comparing the gene expression, also useful in treating soft tissue
PT   sarcoma.
XX
PS   Example 2; SEQ ID NO 650; 210pp; English.
XX
CC   The invention relates to a novel method for detecting soft tissue sarcoma
CC   which comprises obtaining a first soft tissue sample from an individual
CC   and a normal soft tissue sample from the same or different individual,
CC   determining the expression of a gene in both samples and comparing the
CC   expression of the gene in both soft tissue samples, where a higher level
CC   of protein expression in the first soft tissue sample indicates the
CC   presence of soft tissue sarcoma. The method of the invention has
CC   cytostatic applications and may be useful for detecting soft tissue
CC   sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC   acid sequences may be useful in diagnostic and screening applications.
CC   The current sequence is that of a human soft tissue sarcoma-upregulated
CC   protein of the invention. The current sequence is not shown within the
CC   specification per se but was submitted in CD format by the inventor.

PT   New cancer-associated nucleic acid for diagnosing, preventing or treating
PT   cancer (e.g. lymphoma) or for screening agents that may be used for
PT   treating or preventing cancer.
XX
PS   Claim 19; SEQ ID NO 168; 143pp; English.
XX
CC   The present invention describes human cancer-associated (CA) nucleotide
CC   sequences (I). Also described: (1) an expression vector comprising (I);
CC   (2) a host cell comprising (I) or the expression vector; (3) a microarray
CC   for detecting a CA nucleic acid; (4) an isolated polypeptide encoded
CC   within an open reading frame of a CA sequence; (5) an isolated antibody,
CC   or its antigen binding fragment, that binds to the above polypeptide; (6)
CC   a hybridoma that produces the monoclonal antibody described above; (7) a
CC   pharmaceutical composition comprising the antibody and a pharmaceutical
CC   excipient; (8) a kit for detecting or diagnosing cancer cells, comprising
CC   the above (monoclonal) antibody or polynucleotide that selectively
CC   hybridises to any of the polynucleotide sequences mentioned above; (9)
CC   methods for diagnosing cancer or for detecting the presence or absence of
CC   cancer cells in an individual; (10) a method for inhibiting growth of
CC   cancer cells in an individual; (11) a method for delivering a therapeutic
CC   agent to cancer cells in an individual; (12) an electronic library
CC   comprising the polynucleotide or polypeptide, or their fragments,
CC   mentioned above; (13) a method of screening for anticancer activity; (14)
CC   methods for detecting cancer associated with expression of a polypeptide
CC   or the presence of the antibody in a test cell or serum sample; (15) a
CC   method for screening for a bioactive agent capable of modulating the
CC   activity of a CA protein encoded by the above nucleic acid molecule; and
CC   (16) a method for treating cancers. (I) has cytostatic activity, and can
CC   be used in gene therapy, in vaccines, as a tyrosine kinase antagonist,
CC   and as a G-protein coupled receptor antagonist. The compositions and
CC   methods of the present invention can be used for diagnosing, preventing
CC   and treating cancer, especially lymphomas. They may also be used in
CC   screening for agents that may be used for treating or preventing cancer.
CC   The present sequence represents a human CA gene amino acid sequence,
CC   which is given in the exemplification of the present invention. Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences.

PT Identifying an individual who has an altered risk for developing
PT myocardial infarction by detecting a single nucleotide polymorphism in
PT the individual's nucleic acids.
XX
PS Claim 10; SEQ ID NO 1304; 145pp; English.
XX
CC The invention relates to a novel method for identifying an individual who
CC has an altered risk for developing myocardial infarction. The method
CC comprises detecting a single nucleotide polymorphism (SNP) in any one of
CC the nucleotide sequences given in the specification in the individual's
CC nucleic acids, where the presence of the SNP is correlated with an
CC altered risk for myocardial infarction in the individual. The invention
CC further comprises: an isolated nucleic acid molecule comprising at least
CC 8 contiguous nucleotides where one of the nucleotides is an SNP given in
CC the specification or its complement and encoding any one of the amino
CC acid sequences given in the specification; an isolated polypeptide
CC comprising an amino acid sequence given in the specification; an antibody
CC that specifically binds to the polypeptide or its antigen-binding
CC fragment; an amplified polynucleotide containing an SNP given in the
CC specification and which is between about 16 and 1000 nucleotides in
CC length; a kit for detecting an SNP in a nucleic acid, comprising the
CC polynucleotide, a buffer and an enzyme; a method of detecting an SNP in a
CC nucleic acid molecule; a method of detecting a variant polypeptide; and a
CC method for identifying an agent useful in treating or preventing
CC myocardial infarction. The novel detection method has cardiant activity.
CC The nucleic acids of the invention may be used in gene therapy. The
CC method is useful in identifying an individual who has an increased or
CC decreased risk for developing myocardial infarction and for preparing a
CC composition for treating or preventing myocardial infarction. This
CC sequence represents the protein of a human myocardial infarction-
CC associated gene containing one or more SNP's of the invention. Note: This
CC sequence was not shown in the specification. The sequence has come from
CC an electronic sequence listing downloaded from the WIPO website.

PT Treating an ocular neovascular disorder, comprises administering a
PT platelet derived growth factor antagonist and a vascular endothelial
PT growth factor antagonist, simultaneously or within ninety days of each
PT other.
XX
PS Disclosure; SEQ ID NO 14; 112pp; English.
XX
CC The invention relates to a method of treating a patient diagnosed with or
CC at risk for developing a neovascular disorder, or suppressing a
CC neovascular disorder in a patient. The method is useful for treating a
CC patient diagnosed with or at risk for developing a neovascular disorder
CC or suppressing a neovascular disorder in a patient. The neovascular
CC disorder is an ocular neovascular disorder, psoriasis or rheumatoid
CC arthritis. The ocular neovascular disorder is ischemic retinopathy, iris
CC neovascularization, intraocular neovascularization, age-related macular
CC degeneration, corneal neovascularization, retinal neovascularization,
CC choroidal neovascularization, diabetic retinal ischemia, or proliferative
CC diabetic retinopathy. The present sequence represents a human PDGFR
CC protein.

PT Nucleic acid array useful for detecting cancer associated nucleic acid,
PT comprises two or more nucleic acid probes.
XX
PS Disclosure; SEQ ID NO 1435; 198pp; English.
XX
CC The invention relates to a nucleic acid array for detecting a cancer
CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.
CC The invention also relates to a peptide array comprising two or more
CC isolated polypeptides encoded by a CA nucleic acid sequence, a compound
CC that binds to a polypeptide, an isolated antibody or its fragment which
CC binds to a polypeptide, which is prepared by immunizing a host animal
CC with a composition comprising the polypeptide or its antigen binding
CC fragment and collecting cells from the host expressing antibodies against
CC the antigen or its antigen binding fragment, a composition comprising the
CC antibody and a carrier, a method of screening for anticancer activity, a
CC method of detecting a CA nucleic acid, a method of diagnosing cancer, a
CC method of treating cancer and a method of inhibiting expression of a CA
CC nucleic acid in a cell. The CA nucleic acids are useful for detecting CA
CC nucleic acids. The antibody is useful for detecting the presence or
CC absence of cancer cells in an individual which involves contacting cells
CC from the individual with the antibody and detecting a complex of a CA
CC protein from the cancer cells and the antibody, where the detection of
CC the complex correlates with the presence of cancer cells in the
CC individual. The composition is useful for inhibiting growth of cancer
CC cells in an individual or for delivering a therapeutic agent to cancer
CC cells in an individual. The invention is also useful for diagnosing
CC cancer, for treating cancer and for inhibiting expression of a CA gene in
CC a cell. This sequence represents a human cancer-associated protein of the
CC invention.

PT Type alpha platelet-derived growth factor receptor gene - useful for
PT transforming cells to express novel protein receptor and also susceptible
PT to genetic engineering.
XX
PS Claim 7; Fig 3; 64pp; English.
XX
CC The TR4 clone is the largest cDNA clone related to the T11 genomic clone,
CC isolated from a library prepd. from human thymus DNA. The T4 cDNA clone
CC was isolated from a M426 human embryo fibroblast cDNA library. The coding
CC region can be introduced into the pSV2 gpt vector with a simian sarcoma
CC virus LTR as a promoter and expressed in a host. The resulting protein is
CC a novel PDGF receptor designated type alpha (the known receptor is
CC designated type beta). The polypeptide has a calculated molecular mass of
CC 120 kD and has all the characteristics of a membrane spanning tyrosine
CC kinase receptor. The extracellular region comprises a hydrophobic signal
CC peptide and a ligand binding domain which has structural homology with
CC the PDGF-R/CSF1-R subfamily. Ten Cys residues are spaced at the same
CC positions as in other receptors of the sub- family and eight potential N-
CC linked glycosylation sites are also present. A hydrophobic segment spans
CC the membrane and the cyto- plasmic region comprises a juxtamembrane
CC region, a tyrosine kinase region split into TK1 and TK2 by a hydrophilic
CC interkinase region and a hydrophilic C-terminal tail. The TK region
CC includes the consensus ATP binding sequence (G-X-G-X-X-G. . .K) and a
CC tyrosine autophosphorylation site homologous to that of pp60(v-src).
CC (Updated on 25-MAR-2003 to correct PA field.)

PT   New polypeptide for treating or preventing diseases associated with an
PT   abnormal platelet-derived growth factor (PDGF) level, e.g. cell
PT   proliferative or fibrotic diseases, comprises a portion of a PDGF-alpha
PT   or -beta.
XX
PS   Claim 7; Page 64-67; 127pp; English.
XX
```

```
CC   The invention describes a polypeptide comprising a portion of the
CC   receptor tyrosine kinase platelet-derived growth factor alpha receptor
CC   (PDGFalphaR). The polypeptide and the polynucleotide are useful in
CC   treating or preventing diseases and conditions associated with an
CC   abnormal PDGF level or response, such as cell proliferation, cell
CC   migration, extracellular matrix synthesis and secretion or cell
CC   contraction. Exemplary diseases or disorders include cell proliferative
CC   diseases (e.g. cancer, psoriasis) or fibrotic diseases (e.g.
CC   atherosclerosis, liver cirrhosis, pulmonary fibrosis, kidney fibrosis,
CC   scleroderma, keloids, hypertrophic scars, skin wound healing or
CC   proliferative vitreoretinopathy). The method may be used in identifying
CC   compounds for treating or preventing the development of diseases
CC   involving cell contraction, e.g. fibrotic diseases. This is the amino
CC   acid sequence of human platelet derived growth factor receptor (PDGFR)
CC   alpha mutant V859M

PT   or -beta.
XX
PS   Claim 7; Page 45-47; 127pp; English.
XX
CC   The invention describes a polypeptide comprising a portion of the
CC   receptor tyrosine kinase platelet-derived growth factor alpha receptor
CC   (PDGFalphaR). The polypeptide and the polynucleotide are useful in
CC   treating or preventing diseases and conditions associated with an
CC   abnormal PDGF level or response, such as cell proliferation, cell
CC   migration, extracellular matrix synthesis and secretion or cell
CC   contraction. Exemplary diseases or disorders include cell proliferative
CC   diseases (e.g. cancer, psoriasis) or fibrotic diseases (e.g.
CC   atherosclerosis, liver cirrhosis, pulmonary fibrosis, kidney fibrosis,
CC   scleroderma, keloids, hypertrophic scars, skin wound healing or
CC   proliferative vitreoretinopathy). The method may be used in identifying
CC   compounds for treating or preventing the development of diseases
CC   involving cell contraction, e.g. fibrotic diseases. This is the amino
CC   acid sequence of human platelet derived growth factor receptor (PDGFR)
CC   alpha mutant E587K

PT   New polypeptide for treating or preventing diseases associated with an
PT   abnormal platelet-derived growth factor (PDGF) level, e.g. cell
PT   proliferative or fibrotic diseases, comprises a portion of a PDGF-alpha
PT   or -beta.
XX
PS   Claim 7; Page 51-54; 127pp; English.
XX
CC   The invention describes a polypeptide comprising a portion of the
CC   receptor tyrosine kinase platelet-derived growth factor alpha receptor
CC   (PDGFalphaR). The polypeptide and the polynucleotide are useful in
CC   treating or preventing diseases and conditions associated with an
CC   abnormal PDGF level or response, such as cell proliferation, cell
CC   migration, extracellular matrix synthesis and secretion or cell
CC   contraction. Exemplary diseases or disorders include cell proliferative
CC   diseases (e.g. cancer, psoriasis) or fibrotic diseases (e.g.
CC   atherosclerosis, liver cirrhosis, pulmonary fibrosis, kidney fibrosis,
CC   scleroderma, keloids, hypertrophic scars, skin wound healing or
CC   proliferative vitreoretinopathy). The method may be used in identifying
CC   compounds for treating or preventing the development of diseases
CC   involving cell contraction, e.g. fibrotic diseases. This is the amino
CC   acid sequence of human platelet derived growth factor receptor (PDGFR)
CC   alpha mutant T665M

PT   DNA encoding platelet-derived growth factor - used to transform cells for
PT   culturing to detect PDG agonists and antagonists.
XX
PS   Claim 1; Fig 1; 30pp; English.
XX
CC   Gene product may be expressed from a transformed cell. It has utility in
CC   dection of PDGF agonist and antagonist analogues, binding AA, AB and BB
CC   isoforms. PDGF agonists may be used to enhance wound healing, and
CC   antagonists may be used to block the effects of PDGF eg. in treatment of
CC   atherosclerosis or fibrotic diseases. (Updated on 25-MAR-2003 to correct
CC   PA field.)

PT   New isolated variant platelet derived growth factor alpha (PDGFRA)
PT   polypeptide, useful for screening for a compound useful in influencing
PT   PDGFRA-mediated neoplasia in a mammal.
XX
PS   Claim 2; SEQ ID NO 10; 302pp; English.
XX
CC   The invention relates to a novel isolated variant platelet derived growth
CC   factor receptor alpha (PDGFRA) polypeptide. The polypeptide of the
CC   invention is a type III receptor tyrosine kinase (RTK) and may be useful
CC   for screening for a compound that may influence PDGFRA-mediated neoplasia
CC   in a mammal. The current sequence is that of the human PDGFRA cancer-
CC   related activating mutant ER561-562 protein of the invention.

PT   In vitro diagnosis and monitoring of endometriosis, comprises detecting
PT   reduced expression of specific gene products, e.g. from the fibronectin
PT   gene.
XX
PS   Claim 1; Page 11-12; 21pp; German.
XX
CC   The present invention relates to a method for the in vitro diagnosis of
CC   endometriosis by determining the amount of gene product from at least one
CC   specific gene in a patient sample and comparing this with the amount of
CC   gene product in a control sample. A reduced level is indicative of
CC   endometriosis. The gene products may be fibronectin, p27, reticulocalbin,
CC   aldehyde dehydrogenase 6, gravin, phospholipase C epsilon, elastin,
CC   insulin-like growth factor binding protein-2, alpha-2 type IV collagen,
CC   transmembrane receptor PTK7, collagen type XVIII alpha 1, platelet
CC   derived growth factor receptor alpha, laminin M chain, subtilisin like
CC   protein PACE4 or nidogen. The method is useful for initial diagnosis of
CC   endometriosis, and also for monitoring progress and treatment of the
CC   disease. The present sequence is human platelet derived growth factor
CC   receptor alpha

PT   New isolated variant platelet derived growth factor alpha (PDGFRA)
PT   polypeptide, useful for screening for a compound useful in influencing
PT   PDGFRA-mediated neoplasia in a mammal.
XX
PS   Claim 2; SEQ ID NO 23; 302pp; English.
XX
CC   The invention relates to a novel isolated variant platelet derived growth
CC   factor receptor alpha (PDGFRA) polypeptide. The polypeptide of the
CC   invention is a type III receptor tyrosine kinase (RTK) and may be useful
CC   for screening for a compound that may influence PDGFRA-mediated neoplasia
CC   in a mammal. The current sequence is that of the human PDGFRA cancer-
CC   related activating mutant RVIES560-564 protein of the invention.

PT   New isolated variant platelet derived growth factor alpha (PDGFRA)
PT   polypeptide, useful for screening for a compound useful in influencing
PT   PDGFRA-mediated neoplasia in a mammal.
XX
PS   Claim 2; SEQ ID NO 12; 302pp; English.
XX
CC   The invention relates to a novel isolated variant platelet derived growth
CC   factor receptor alpha (PDGFRA) polypeptide. The polypeptide of the
CC   invention is a type III receptor tyrosine kinase (RTK) and may be useful
CC   for screening for a compound that may influence PDGFRA-mediated neoplasia
CC   in a mammal. The current sequence is that of the human PDGFRA cancer-
CC   related activating mutant SPDGHE566-571R protein of the invention.

PT Nucleic acid array useful for detecting cancer associated nucleic acid,
PT comprises two or more nucleic acid probes.
XX
PS Disclosure; SEQ ID NO 1430; 198pp; English.
XX
CC The invention relates to a nucleic acid array for detecting a cancer
CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.
CC The invention also relates to a peptide array comprising two or more
CC isolated polypeptides encoded by a CA nucleic acid sequence, a compound
CC that binds to a polypeptide, an isolated antibody or its fragment which
CC binds to a polypeptide, which is prepared by immunizing a host animal
CC with a composition comprising the polypeptide or its antigen binding
CC fragment and collecting cells from the host expressing antibodies against
CC the antigen or its antigen binding fragment, a composition comprising the
CC antibody and a carrier, a method of screening for anticancer activity, a
CC method of detecting a CA nucleic acid, a method of diagnosing cancer, a
CC method of treating cancer and a method of inhibiting expression of a CA
CC nucleic acid in a cell. The CA nucleic acids are useful for detecting CA
CC nucleic acids. The antibody is useful for detecting the presence or
CC absence of cancer cells in an individual which involves contacting cells
CC from the individual with the antibody and detecting a complex of a CA
CC protein from the cancer cells and the antibody, where the detection of
CC the complex correlates with the presence of cancer cells in the
CC individual. The composition is useful for inhibiting growth of cancer
CC cells in an individual or for delivering a therapeutic agent to cancer
CC cells in an individual. The invention is also useful for diagnosing
CC cancer, for treating cancer and for inhibiting expression of a CA gene in
CC a cell. This sequence represents a murine cancer-associated protein of
CC the invention.

CC   The present invention describes human cancer-associated (CA) nucleotide
CC   sequences (I). Also described: (1) an expression vector comprising (I);
CC   (2) a host cell comprising (I) or the expression vector; (3) a microarray
CC   for detecting a CA nucleic acid; (4) an isolated polypeptide encoded
CC   within an open reading frame of a CA sequence; (5) an isolated antibody,
CC   or its antigen binding fragment, that binds to the above polypeptide; (6)
CC   a hybridoma that produces the monoclonal antibody described above; (7) a
CC   pharmaceutical composition comprising the antibody and a pharmaceutical
CC   excipient; (8) a kit for detecting or diagnosing cancer cells, comprising
CC   the above (monoclonal) antibody or polynucleotide that selectively
CC   hybridises to any of the polynucleotide sequences mentioned above; (9)
CC   methods for diagnosing cancer or for detecting the presence or absence of
CC   cancer cells in an individual; (10) a method for inhibiting growth of
CC   cancer cells in an individual; (11) a method for delivering a therapeutic
CC   agent to cancer cells in an individual; (12) an electronic library
CC   comprising the polynucleotide or polypeptide, or their fragments,
CC   mentioned above; (13) a method of screening for anticancer activity; (14)
CC   methods for detecting cancer associated with expression of a polypeptide
CC   or the presence of the antibody in a test cell or serum sample; (15) a
CC   method for screening for a bioactive agent capable of modulating the
CC   activity of a CA protein encoded by the above nucleic acid molecule; and
CC   (16) a method for treating cancers. (I) has cytostatic activity, and can
CC   be used in gene therapy, in vaccines, as a tyrosine kinase antagonist,
CC   and as a G-protein coupled receptor antagonist. The compositions and
CC   methods of the present invention can be used for diagnosing, preventing
CC   and treating cancer, especially lymphomas. They may also be used in
CC   screening for agents that may be used for treating or preventing cancer.
CC   The present sequence represents a human CA gene amino acid sequence,
CC   which is given in the exemplification of the present invention. Note: The
CC   sequence data for this patent did not form part of the printed
```

```
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences.

XX
CC   The sequence given is one allele of type A human platelet-derived growth
CC   factor (PDGF) receptor (PDGF-R). This receptor is typically found on
CC   cells of mesenchymal origin. It acts while in the form of two
CC   transmembrane glycoproteins, each of which is about 180 kD. This receptor
CC   has three major regions. The first is a transmembrane region, which spans
CC   the membrane once, separating the regions of the receptor exterior to the
CC   cell from those interior to the cell. The second region is an
CC   extracellular region which contains the domains which bind the PDGF. The
CC   third region is an intracellular region which posseses a tyrosine kinase
CC   activity. This tyrosine kinase domain is notable in having an insert of
CC   approx. 100 amino acids, as compared with most other receptor tyrosine
CC   kinase domains which are contiguous or have shorter insert sequences.
CC   Fragments of this sequence between 8 and 400 amino acids comprising one
CC   or more PDGF ligand binding region from the extracellular domain may be
CC   used to bind a PDGF ligand. (Updated on 25-MAR-2003 to correct PN field.)

PT New polypeptide for treating or preventing diseases associated with an
PT abnormal platelet-derived growth factor (PDGF) level, e.g. cell
PT proliferative or fibrotic diseases, comprises a portion of a PDGF-alpha
PT or -beta.
XX
PS Claim 3; Page 69-71; 127pp; English.
XX
CC The invention describes a polypeptide comprising a portion of the
CC receptor tyrosine kinase platelet-derived growth factor alpha receptor
CC (PDGFalphaR). The polypeptide and the polynucleotide are useful in
CC treating or preventing diseases and conditions associated with an
CC abnormal PDGF level or response, such as cell proliferation, cell
CC migration, extracellular matrix synthesis and secretion or cell
CC contraction. Exemplary diseases or disorders include cell proliferative
CC diseases (e.g. cancer, psoriasis) or fibrotic diseases (e.g.
CC atherosclerosis, liver cirrhosis, pulmonary fibrosis, kidney fibrosis,
CC scleroderma, keloids, hypertrophic scars, skin wound healing or
CC proliferative vitreoretinopathy). The method may be used in identifying
CC compounds for treating or preventing the development of diseases
CC involving cell contraction, e.g. fibrotic diseases. This is the amino
CC acid sequence of human platelet derived growth factor receptor (PDGFR)
CC alpha truncation mutant

PT New tyrosine kinase fusion polypeptide, useful for diagnosing disease
PT conditions associated with the fusion polypeptide, and for identifying
PT agents for treating associated hyperproliferative disease conditions,
PT e.g. cancer or psoriasis.
XX
PS Claim 10; SEQ ID NO 2; 95pp; English.
XX
CC This sequence represents an NM_030917-PDGFR-alpha fusion protein splice
CC variant. The fusion polypeptide of the invention comprises a C-terminal
CC tyrosine kinase domain and an N-terminal domain. The fusion protein has a
CC constitutively activated kinase activity, and is present in other than
CC its naturally occurring environment. The N- and C-terminal domains are
CC from chromosome 4 encoded proteins, and the fusion protein is not a
CC product of a translocation event. The fusion polypeptide or the
CC polynucleotide encoding it, are useful for determining whether a host
CC suffers from a disease condition, e.g. a hyperproliferative disease
CC condition. An agent that inhibits the activity or expression of the
CC fusion polypeptide is useful for treating a hyperproliferative disease
CC condition, such as cancer, atherosclerosis, graft coronary vascular
CC disease after transplantation, restenosis after angioplasty or stent
CC replacement, epidermal hyperproliferation, tissue remodeling and repair,
CC psoriasis, multiple sclerosis, rheumatoid arthritis, diabetes mellitus,
CC or inflammatory bowel disease. The polynucleotides are also useful as
CC probes and primers in hybridization applications, or in the
CC identification of homologues, expression regulatory factors or expression
CC patterns in biological specimens.

PT   New tyrosine kinase fusion polypeptide, useful for diagnosing disease
PT   conditions associated with the fusion polypeptide, and for identifying
PT   agents for treating associated hyperproliferative disease conditions,
PT   e.g. cancer or psoriasis.
XX
PS   Claim 10; SEQ ID NO 4; 95pp; English.
XX
CC   This sequence represents an NM_030917-PDGFR-alpha fusion protein splice
CC   variant. The fusion polypeptide of the invention comprises a C-terminal
CC   tyrosine kinase domain and an N-terminal domain. The fusion protein has a
CC   constitutively activated kinase activity, and is present in other than
CC   its naturally occurring environment. The N- and C-terminal domains are
CC   from chromosome 4 encoded proteins, and the fusion protein is not a
CC   product of a translocation event. The fusion polypeptide or the
CC   polynucleotide encoding it, are useful for determining whether a host
CC   suffers from a disease condition, e.g. a hyperproliferative disease
CC   condition. An agent that inhibits the activity or expression of the
CC   fusion polypeptide is useful for treating a hyperproliferative disease
CC   condition, such as cancer, atherosclerosis, graft coronary vascular
CC   disease after transplantation, restenosis after angioplasty or stent
CC   replacement, epidermal hyperproliferation, tissue remodeling and repair,
CC   psoriasis, multiple sclerosis, rheumatoid arthritis, diabetes mellitus,
CC   or inflammatory bowel disease. The polynucleotides are also useful as
CC   probes and primers in hybridization applications, or in the
CC   identification of homologues, expression regulatory factors or expression
CC   patterns in biological specimens.

PT   New scaffold library used for identifying and developing ligands for
PT   protein kinases and treating kinase associated disorders e.g. cancer,
PT   comprises set of compounds comprising N-heterocyclic compounds.
XX
PS   Disclosure; Page 170-174; 236pp; English.
XX
CC   The invention relates to a new kinase scaffold library comprises at least
CC   1 set of compounds, each set comprising at least 1 N-heterocyclic
CC   compound of formulae (I)-(VII) given in the specification. Also included
CC   are a system for fitting compounds in binding sites of protein kinases
CC   (comprising an electronic kinase scaffold, and a scaffold library
```

```
CC   comprising at least 1 collection of electronic representations of (I)-
CC   (VII), where the scaffold library is embedded in a computer device and
CC   the electronic representations of the compounds can be selectively
CC   retrieved and functionally connected with computer software adapted to
CC   fit electronic representations of compounds in an electronic
CC   representation of a binding site of a kinase), obtaining improved ligands
CC   binding to a protein kinase (which comprises determining if a derivative
CC   of (I)-(VII) binds to the kinase with greater affinity and/or specificity
CC   than (I)-(VII)), developing ligands specific for a particular kinase
CC   (which comprises determining if a derivative of (I)-(VII) that binds to
CC   kinases has greater for specificity for the particular kinase than (I)-
CC   (VII), developing ligands binding to a kinase (which comprises
CC   determining the orientation of at least 1 molecular scaffold of (I)-(VII)
CC   in co-crystals with the kinase, identifying chemical structures of the
CC   scaffolds, that, when modified, change the binding affinity and/or
CC   specificity between the scaffold and kinase and synthesizing a ligand in
CC   which at least 1 chemical structure of the scaffold is modified),
CC   developing ligands with increased specificity on a kinase (which
CC   comprises testing a derivative of a kinase binding compound (I)-(VII) for
CC   increased specificity on the kinase), identifying a ligand binding to a
CC   kinase (which comprises determining if a derivative compound including a
CC   core structure (I)-(VII) binds to the kinase with changed binding
CC   affinity and/or specificity), a co-crystal of a kinase and a binding
CC   compound (I)-(VII), preparation of co-crystals of Pim-1 with (I)-(VII),
CC   identifying potential kinase binding compounds (which comprises fitting
CC   electronic representations of (I)-(VII) in an electronic representation
CC   of a kinase binding site), attaching a kinase binding compound to an
CC   attachment component (which comprises identifying energetically allowed
CC   sites for attachment of the component on a kinase binding compound (I)-
CC   (VII) and attaching the compound or derivative to the attachment
CC   component at the allowed site), modified compounds (comprising (I)-(VIII)
CC   with an attached linker group, and developing a ligand for a kinase
CC   comprising conserved residues matching at least on of Pim-1 residues 49,
CC   52, 67, 121, 128 and 186 which comprises determining if (I)-(VII) binds
CC   to the kinase. The kinases comprise Pim-1, Pyk2, c-Abl, Her2, cMet,
CC   vascular endothelial growth factor receptor, endothelial growth factor
CC   receptor, cKit, Pkcbeta, p38, Cdk2, Akt or Gsk3beta. The kinase scaffold
CC   library is used for identifying and developing ligands binding to
CC   kinases, for modulating kinase activity and for treating disease
CC   condition associated with abnormal kinase activity e.g. cancer,
CC   inflammatory disease. The method identifies improved ligands binding to a
CC   kinase resulting in ligands having high affinity and specificity towards
CC   kinase. The co-crystals of kinase and the binding compound are of
CC   sufficient size and quality to allow structural determination of at least
CC   2 Angstroms. The present sequence is a catalytic domain from a PIM-like
CC   kinase. NOTE: It is not clear whether the sequence as presented
CC   represents a continuous amino acid sequence.

PT   Platelet derived growth factor receptor (PDGF-R) poly:peptide(s) - useful
PT   as therapeutic and diagnostic agents e.g. for assaying PDGF activity in
PT   sample.
XX
PS   Disclosure; Page 75; 109pp; English.
XX
CC   The sequence given is one allele of type B human platelet-derived growth
CC   factor (PDGF) receptor (PDGF-R). This receptor is typically found on
CC   cells of mesenchymal origin. It acts while in the form of two
CC   transmembrane glycoproteins, each of which is about 180 kD. This receptor
CC   has three major regions. The first is a transmembrane region, which spans
CC   the membrane once, separating the regions of the receptor exterior to the
CC   cell from those interior to the cell. The second region is an
CC   extracellular region which contains the domains which bind the PDGF. The
CC   third region is an intracellular region which posseses a tyrosine kinase
CC   activity. This tyrosine kinase domain is notable in having an insert of
CC   approx. 100 amino acids, as compared with most other receptor tyrosine
CC   kinase domains which are contiguous or have shorter insert sequences.
CC   Fragments of this sequence between 8 and 400 amino acids comprising one
CC   or more PDGF ligand binding region from the extracellular domain may be
CC   used to bind a PDGF ligand. (Updated on 25-MAR-2003 to correct PN field.)

XX
CC   Platelet derived growth factor receptor (see corresp. AAN90355). Used in
CC   the invention to make analogues that are secreted (pref. Ile-29 - Met-
CC   441, and Ile-29 - Lys-531; see specification for details). These
CC   analogues are easily purified, produced in large quantities
CC   recombinantly, used to produce antibodies, to screen ligands as imaging
CC   agents, as (ant-)agonists, or therapeutically for atherosclerosis and
CC   wound healing, and assays. (Updated on 25-MAR-2003 to correct PI field.)

PT   Prodn. of biologically active peptide dimers, esp. platelet-derived
PT   growth factor receptor analogues - useful for systematic designing of
PT   novel (ant)agonists.
XX
PS   Disclosure; Fig 1; 45pp; English.
XX
CC   The amino acid sequence (AAR99690) of human platelet-derived growth
CC   factor receptor (PDGF-R) was deduced from a cDNA clone (AAT34552)
CC   isolated from a human diploid dermal fibroblast library. The cDNA can be
CC   used in novel constructs that allow the prodn. of secreted biologically
CC   active PDGF-R analogues. This may comprise linking a sequence coding for
CC   PDGR-R, or the ligand- binding domain of the PDGF-R extracellular region,
CC   to a protein secretion signal (e.g. SUC2) and promoter, and expression in
CC   transformed host cells, esp. Saccharomyces cerevisiae. The secreted PDGF-
CC   R analogues are used in ligand screening procedures, to screen for
CC   (ant)agonists, and in diagnostic assays. (Updated on 25-MAR-2003 to
CC   correct PF field.) (Updated on 25-MAR-2003 to correct PR field.)

PT New polypeptide for treating or preventing diseases associated with an
PT abnormal platelet-derived growth factor (PDGF) level, e.g. cell
PT proliferative or fibrotic diseases, comprises a portion of a PDGF-alpha
PT or -beta.
XX
PS Claim 7; Page 101-104; 127pp; English.
XX
CC The invention describes a polypeptide comprising a portion of the
CC receptor tyrosine kinase platelet-derived growth factor alpha receptor
CC (PDGFalphaR). The polypeptide and the polynucleotide are useful in
CC treating or preventing diseases and conditions associated with an
CC abnormal PDGF level or response, such as cell proliferation, cell
CC migration, extracellular matrix synthesis and secretion or cell
CC contraction. Exemplary diseases or disorders include cell proliferative
CC diseases (e.g. cancer, psoriasis) or fibrotic diseases (e.g.
CC atherosclerosis, liver cirrhosis, pulmonary fibrosis, kidney fibrosis,
CC scleroderma, keloids, hypertrophic scars, skin wound healing or
CC proliferative vitreoretinopathy). The method may be used in identifying
CC compounds for treating or preventing the development of diseases
CC involving cell contraction, e.g. fibrotic diseases. This is the amino
CC acid sequence of human platelet derived growth factor receptor (PDGFR)
CC beta mutant L867M

PT   New baculovirus having a modified genome encoding a therapeutic agent,
PT   useful in the manufacture of a medicament for the treatment of cancer,
PT   particularly prostate cancer.
XX
PS   Claim 33; Page; 34pp; English.
XX
CC   The present invention describes a humanised baculovirus (I) which
CC   comprises a modified baculovirus genome having a nucleic acid molecule
CC   encoding a therapeutic agent and a polypeptide which functions to target
CC   the baculovirus to at least one cell type. Also described is a
CC   pharmaceutical composition comprising (I). (I) has cytostatic activity,
CC   and can be used in gene therapy. The baculovirus is useful in the
CC   manufacture of a medicament for the treatment of cancer, particularly
CC   prostate cancer. The present sequence represents the human platelet-
CC   derived growth factor receptor beta protein, which is specified in the
CC   exemplification of the present invention. N.B. The present sequence is
CC   not given in the specification but is referred to in Claim 33 as Genbank
CC   accession number NM_002609

PT Treating a vascular condition, e.g. myocardial infarction,
PT atherosclerosis, ischemia, congestive heart failure, hypertension,
PT stroke, thrombosis, arrhythmia or tachycardia, by administering
PT endothelial precursor cells.
XX
PS Claim 24; Page 47-48; 110pp; English.
XX
CC The present invention relates to a method of treating a vascular
CC condition in a mammal, which comprises administering to the mammal a
CC therapeutic amount of endothelial precursor cells. The method and cells
CC of the invention are useful for treating a vascular condition, e.g.
CC myocardial infarction, atherosclerosis, ischaemia, tachycardia,
CC congestive heart failure, peripheral vasculature disorder, hypertension,
CC stroke, thrombosis, arrhythmia or tachycardia. The present sequence is a
CC protein shown in the exemplification of the invention

PT   Identifying ligand binding to inactive conformation of target protein
PT   kinase (T) comprises contacting the conformation modified (T) which
PT   contains reactive group at binding site, with ligands and detecting
PT   kinase-ligand conjugate formation.
XX
PS   Disclosure; SEQ ID NO 51; 260pp; English.
XX
CC   The present invention relates to a method for identifying a ligand (L),
CC   which binds to an inactive conformation of target protein kinase (T). The
CC   method involves contacting inactive conformation of (T), which contains
CC   or is modified to contain a reactive group at or near a binding site of
CC   interest, with one or more ligand candidates capable of covalently
CC   bonding to the reactive group thus forming a kinase-(L) conjugate (C).
CC   The method is useful for identifying protein kinase inhibitors that
CC   preferentially bind to inactive conformation of a target protein kinase.
CC   The present sequence is a protein kinase which may be modified via an
CC   amino acid substitution, for use in the method of the invention.

PT   New isolated cancer-associated polynucleotides and polypeptides useful
PT   for diagnosing, preventing or treating cancers, especially lymphoma and
PT   leukemia, or in screening for agents that modulate cancer.
XX
PS   claim 18; seqid 710; 310pp; English.
XX
CC   The invention relates to an isolated nucleic acid comprising at least 10
CC   contiguous nucleotides of any of the 233 polynucleotide sequences given
CC   in the specification, or its complement. The nucleic acids encode cancer-
CC   associated proteins. Also included are an expression vector comprising
CC   the isolated nucleic acid cited above, a host cell comprising the above
CC   recombinant nucleic acid or expression vector, a microarray for detecting
CC   a cancer-associated (CA) nucleic acid comprising at least one probe
CC   comprising at least 10 contiguous nucleotides of any of the above-
CC   mentioned nucleotide sequences, an isolated polypeptide (encoded within
CC   an open reading frame of a CA sequence selected from any of the 95
CC   polynucleotide sequences as mentioned in the specification, or its
CC   complement), an isolated antibody, (or its antigen binding fragment) that
CC   binds to the above polypeptide, a hybridoma that produces the above
CC   monoclonal antibody, a pharmaceutical composition comprising the above
CC   antibody and a pharmaceutical excipient, a kit for detecting cancer
CC   cells(comprising the antibody cited above, methods for diagnosing cancer
CC   or for detecting the presence or absence of cancer cells in an
CC   individual, a method for inhibiting growth of cancer cells in an
CC   individual, a method for delivering a therapeutic agent to cancer cells
CC   in an individual, an electronic library comprising the above
CC   polynucleotide or polypeptide (or their fragments), methods of screening
CC   for anticancer activity or for a bioactive agent capable of modulating
CC   the activity of a CA protein (CAP), methods for detecting cancer
CC   associated with expression of a polypeptide in a test cell sample, a
CC   method for treating cancers and a method for inhibiting the expression of
CC   CA gene in a cell. The composition and methods are useful for detecting,
CC   diagnosing, preventing and treating cancers, especially lymphoma and
CC   leukaemia. These may also be used in screening for agents that modulate
CC   cancer. The present sequence is a human CAP protein sequence. Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

PT   Use of a FADS2 interacting molecule for preparing a pharmaceutical
PT   composition for treating neurodegenerative diseases.
XX
PS   Claim 13; SEQ ID NO 78; 488pp; English.
XX
CC   The invention relates to a novel FADS2 (fatty acid delta6 desaturase)
CC   interacting molecule to be used in the preparation of a pharmaceutical
CC   composition for treating neurodegenerative diseases. FADS2 has been found
CC   to form part of different intracellular protein complexes that are
CC   involved in the aberrant gamma secretase processing of amyloid precursor
CC   protein (APP) in Alzheimer's disease. In particular, it has been found
CC   that FADS2 is a component of the nicastrin-complex, the BACE1 (beta-site
CC   APP-cleaving enzyme 1)-complex, the Psen2 (presenilin 2)-complex and the
CC   PTK7 (protein tyrosine kinase 7)-complex. The molecule of the invention
CC   demonstrates neuroprotective activity and may be useful for modulating
CC   gamma secretase and/or beta secretase activity in vitro. Thus the FADS2
CC   interacting molecule may be useful for preparing a pharmaceutical
CC   composition for diagnosing, treating or preventing neurodegenerative
CC   diseases, particularly, Alzheimer's disease. The complex provided by the
CC   invention which comprises FADS2 and one or more proteins may be useful as
CC   a target for the active agent of such a pharmaceutical composition. The
CC   current sequence is that of the human FADS2-interacting BACE1-complex
CC   member, PDGFRB protein of the invention. The BACE1 complex is involved in
CC   APP processing by beta-secretase.

PT New isolated cancer-associated polynucleotides and polypeptides useful
PT for diagnosing, preventing or treating cancers, especially lymphoma and
PT leukemia, or in screening for agents that modulate cancer.
XX
PS claim 18; seqid 706; 310pp; English.
XX
CC The invention relates to an isolated nucleic acid comprising at least 10
CC contiguous nucleotides of any of the 233 polynucleotide sequences given
CC in the specification, or its complement. The nucleic acids encode cancer-
CC associated proteins. Also included are an expression vector comprising
CC the isolated nucleic acid cited above, a host cell comprising the above
CC recombinant nucleic acid or expression vector, a microarray for detecting
CC a cancer-associated (CA) nucleic acid comprising at least one probe
CC comprising at least 10 contiguous nucleotides of any of the above-
CC mentioned nucleotide sequences, an isolated polypeptide (encoded within
CC an open reading frame of a CA sequence selected from any of the 95
CC polynucleotide sequences as mentioned in the specification, or its
CC complement), an isolated antibody, (or its antigen binding fragment) that
CC binds to the above polypeptide, a hybridoma that produces the above
CC monoclonal antibody, a pharmaceutical composition comprising the above
CC antibody and a pharmaceutical excipient, a kit for detecting cancer
CC cells(comprising the antibody cited above, methods for diagnosing cancer
CC or for detecting the presence or absence of cancer cells in an
CC individual, a method for inhibiting growth of cancer cells in an
CC individual, a method for delivering a therapeutic agent to cancer cells
CC in an individual, an electronic library comprising the above
CC polynucleotide or polypeptide (or their fragments), methods of screening
CC for anticancer activity or for a bioactive agent capable of modulating
CC the activity of a CA protein (CAP), methods for detecting cancer
CC associated with expression of a polypeptide in a test cell sample, a
CC method for treating cancers and a method for inhibiting the expression of
CC CA gene in a cell. The composition and methods are useful for detecting,
CC diagnosing, preventing and treating cancers, especially lymphoma and
CC leukaemia. These may also be used in screening for agents that modulate
CC cancer. The present sequence is a human CAP protein sequence. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

PT   Use of a FADS2 interacting molecule for preparing a pharmaceutical
PT   composition for treating neurodegenerative diseases.
XX
PS   Claim 13; SEQ ID NO 43; 488pp; English.
XX
CC   The invention relates to a novel FADS2 (fatty acid delta6 desaturase)
CC   interacting molecule to be used in the preparation of a pharmaceutical
CC   composition for treating neurodegenerative diseases. FADS2 has been found
CC   to form part of different intracellular protein complexes that are
CC   involved in the aberrant gamma secretase processing of amyloid precursor
CC   protein (APP) in Alzheimer's disease. In particular, it has been found
CC   that FADS2 is a component of the nicastrin-complex, the BACE1 (beta-site
CC   APP-cleaving enzyme 1)-complex, the Psen2 (presenilin 2)-complex and the
CC   PTK7 (protein tyrosine kinase 7)-complex. The molecule of the invention
CC   demonstrates neuroprotective activity and may be useful for modulating
CC   gamma secretase and/or beta secretase activity in vitro. Thus the FADS2
CC   interacting molecule may be useful for preparing a pharmaceutical
CC   composition for diagnosing, treating or preventing neurodegenerative
CC   diseases, particularly, Alzheimer's disease. The complex provided by the
CC   invention which comprises FADS2 and one or more proteins may be useful as
CC   a target for the active agent of such a pharmaceutical composition. The
CC   current sequence is that of the human FADS2-interacting BACE1-complex
CC   member, PDGFRB protein of the invention. The BACE1 complex is involved in
CC   APP processing by beta-secretase.

PT New polypeptide for treating or preventing diseases associated with an
PT abnormal platelet-derived growth factor (PDGF) level, e.g. cell

PT proliferative or fibrotic diseases, comprises a portion of a PDGF-alpha
PT or -beta.
XX
PS Claim 7; Page 81-84; 127pp; English.
XX
CC The invention describes a polypeptide comprising a portion of the
CC receptor tyrosine kinase platelet-derived growth factor alpha receptor
CC (PDGFalphaR). The polypeptide and the polynucleotide are useful in
CC treating or preventing diseases and conditions associated with an
CC abnormal PDGF level or response, such as cell proliferation, cell
CC migration, extracellular matrix synthesis and secretion or cell
CC contraction. Exemplary diseases or disorders include cell proliferative
CC diseases (e.g. cancer, psoriasis) or fibrotic diseases (e.g.
CC atherosclerosis, liver cirrhosis, pulmonary fibrosis, kidney fibrosis,
CC scleroderma, keloids, hypertrophic scars, skin wound healing or
CC proliferative vitreoretinopathy). The method may be used in identifying
CC compounds for treating or preventing the development of diseases
CC involving cell contraction, e.g. fibrotic diseases. This is the amino
CC acid sequence of human platelet derived growth factor receptor (PDGFR)
CC beta mutant E594K

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC   -!- FUNCTION: Receptor that binds both PDGFA and PDGFB and has a
CC       tyrosine-protein kinase activity.
CC   -!- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + a protein
CC       tyrosine phosphate.
CC   -!- SUBUNIT: Homodimer, and heterodimer with PDGFRB.
CC   -!- SUBCELLULAR LOCATION: Type I membrane protein.
CC   -!- ALTERNATIVE PRODUCTS:
CC       Event=Alternative splicing; Named isoforms=2;
CC       Name=1;
CC         IsoId=P16234-1; Sequence=Displayed;
CC       Name=2;
CC         IsoId=P16234-2; Sequence=VSP_007833, VSP_007834;
CC         Note=No experimental confirmation available;
CC   -!- DISEASE: A fusion of PDGFRA and FIP1L1 (FIP1L1-PDGFRA), due to an
CC       interstitial chromosomal deletion, is the cause of some cases of
CC       hypereosinophilic syndrome (HES) [MIM:607685]. HES is a rare
CC       hematologic disorder characterized by sustained overproduction of
CC       eosinophils in the bone marrow, eosinophilia, tissue infiltration
CC       and organ damage.
CC   -!- SIMILARITY: Belongs to the Tyr protein kinase family. CSF-1/PDGF
CC       receptor subfamily.
CC   -!- SIMILARITY: Contains 3 Ig-like C2-type (immunoglobulin-like)
CC       domains.

CC   -!- FUNCTION: Receptor that binds both PDGFA and PDGFB and has a
CC   tyrosine-protein kinase activity.
CC   -!- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + a protein
CC   tyrosine phosphate.
CC   -!- SUBUNIT: Homodimer, and heterodimer with PDGFRB.
CC   -!- SUBCELLULAR LOCATION: Type I membrane protein.
CC   -!- SIMILARITY: Belongs to the Tyr protein kinase family. CSF-1/PDGF
CC   receptor subfamily.
CC   -!- SIMILARITY: Contains 3 Ig-like C2-type (immunoglobulin-like)
CC   domains.

CC   -!- FUNCTION: Receptor that binds both PDGFA and PDGFB and has a
CC       tyrosine-protein kinase activity.
CC   -!- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + a protein
CC       tyrosine phosphate.
CC   -!- SUBUNIT: Homodimer, and heterodimer with PDGFRB.
CC   -!- SUBCELLULAR LOCATION: Type I membrane protein.
CC   -!- SIMILARITY: Belongs to the Tyr protein kinase family. CSF-1/PDGF
CC       receptor subfamily.
CC   -!- SIMILARITY: Contains 3 Ig-like C2-type (immunoglobulin-like)
CC       domains.

RT   "The Xenopus platelet-derived growth factor alpha receptor: cDNA
RT   cloning and demonstration that mesoderm induction establishes the
RT   lineage-specific pattern of ligand and receptor gene expression.";
RL   Dev. Genet. 14:185-193(1993).
CC   -!- FUNCTION: Receptor that binds both PDGFA and PDGFB and has a
CC       tyrosine-protein kinase activity.
CC   -!- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + a protein
CC       tyrosine phosphate.
CC   -!- SUBUNIT: Homodimer, and heterodimer with PDGFRB.
CC   -!- SUBCELLULAR LOCATION: Type I membrane protein.
CC   -!- SIMILARITY: Belongs to the Tyr protein kinase family. CSF-1/PDGF
CC       receptor subfamily.
CC   -!- SIMILARITY: Contains 5 Ig-like C2-type (immunoglobulin-like)
CC       domains.

CC   -!- FUNCTION: Receptor that binds specifically to PDGFB and has a
CC       tyrosine-protein kinase activity. Phosphorylates Tyr residues at
CC       the C-terminus of PTPN11 creating a binding site for the SH2
CC       domain of GRB2.
CC   -!- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + a protein
CC       tyrosine phosphate.
CC   -!- SUBUNIT: Homodimer, and heterodimer with PDGFRA. Interacts with
CC       APS. The autophoshorylated form interacts with PIK3C2B, maybe
CC       indirectly.
CC   -!- SUBCELLULAR LOCATION: Type I membrane protein.
CC   -!- DISEASE: A chromosomal aberration involving PDGFRB is found in a
CC       form of chronic myelomonocytic leukemia (CMML). Translocation
CC       t(5;12)(q33;p13) with EVT6/TEL. It is characterized by abnormal
CC       clonal myeloid proliferation and by progression to acute
CC       myelogenous leukemia (AML).
CC   -!- DISEASE: A chromosomal aberration involving PDGFRB may be a cause
CC       of acute myelogenous leukemia. Translocation t(5;14)(q33;q32) with
CC       TRIP11. The fusion protein may be involved in clonal evolution of
CC       leukemia and eosinophilia.
CC   -!- SIMILARITY: Belongs to the Tyr protein kinase family. CSF-1/PDGF
CC       receptor subfamily.
CC   -!- SIMILARITY: Contains 4 Ig-like C2-type (immunoglobulin-like)
CC       domains.

CC       domain of GRB2 (By similarity).
CC   -!- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + a protein
CC       tyrosine phosphate.
CC   -!- SUBUNIT: Homodimer, and heterodimer with PDGFRA. Interacts with
CC       APS. The autophoshorylated form interacts with PIK3C2B, maybe
CC       indirectly (By similarity).
CC   -!- SUBCELLULAR LOCATION: Type I membrane protein.
CC   -!- SIMILARITY: Belongs to the Tyr protein kinase family. CSF-1/PDGF
CC       receptor subfamily.
CC   -!- SIMILARITY: Contains 4 Ig-like C2-type (immunoglobulin-like)
CC       domains.
CC   ----------------------------------------------------------------------
CC   This Swiss-Prot entry is copyright. It is produced through a collaboration
CC   between the Swiss Institute of Bioinformatics and the EMBL outstation -
CC   the European Bioinformatics Institute. There are no restrictions on its
CC   use as long as its content is in no way modified and this statement is not
CC   removed.

CC   -!- FUNCTION: Receptor that binds specifically to PDGFB and has a
CC       tyrosine-protein kinase activity. Phosphorylates Tyr residues at
CC       the C-terminus of PTPN11 creating a binding site for the SH2
CC       domain of GRB2 (By similarity).
CC   -!- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + a protein
CC       tyrosine phosphate.
CC   -!- SUBUNIT: Homodimer, and heterodimer with PDGFRA. The
CC       autophoshorylated form interacts with PIK3C2B, maybe indirectly
CC       (By similarity).
CC   -!- SUBCELLULAR LOCATION: Type I membrane protein.
CC   -!- SIMILARITY: Belongs to the Tyr protein kinase family. CSF-1/PDGF
CC       receptor subfamily.
CC   -!- SIMILARITY: Contains 4 Ig-like C2-type (immunoglobulin-like)
CC       domains.
CC   ---------------------------------------------------------------------

RL   Submitted (SEP-2003) to the EMBL/GenBank/DDBJ databases.
CC   -!- FUNCTION: Plays a key role in the control of the eukaryotic cell
CC       cycle. It is required in higher cells for entry into S-phase and
CC       mitosis. Component of the kinase complex that phosphorylates the
CC       repetitive C-terminus of RNA polymerase II. Catalytic component of
CC       MPF (By similarity).
CC   -!- SUBUNIT: Forms a stable but non-covalent complex with cyclin B in
CC       mature oocytes (By similarity).

RN   [2]
RP   NUCLEOTIDE SEQUENCE.
RG   Genoscope; Whitehead Institute Centre for Genome Research;
RL   Submitted (FEB-2004) to the EMBL/GenBank/DDBJ databases.
CC   -!- CAUTION: The sequence shown here is derived from an
```

```
CC       EMBL/GenBank/DDBJ whole genome shotgun (WGS) entry which is
CC       preliminary data.
CC   -!- FUNCTION: Plays a key role in the control of the eukaryotic cell
CC       cycle. It is required in higher cells for entry into S-phase and
CC       mitosis. Component of the kinase complex that phosphorylates the
CC       repetitive C-terminus of RNA polymerase II. Catalytic component of
CC       MPF (By similarity).
CC   -!- SUBUNIT: Forms a stable but non-covalent complex with cyclin B in
CC       mature oocytes (By similarity).

RN   [2]
RP   NUCLEOTIDE SEQUENCE.
RG   Genoscope; Whitehead Institute Centre for Genome Research;
RL   Submitted (FEB-2004) to the EMBL/GenBank/DDBJ databases.
CC   -!- CAUTION: The sequence shown here is derived from an
CC       EMBL/GenBank/DDBJ whole genome shotgun (WGS) entry which is
CC       preliminary data.
CC   -!- FUNCTION: Plays a key role in the control of the eukaryotic cell
CC       cycle. It is required in higher cells for entry into S-phase and
CC       mitosis. Component of the kinase complex that phosphorylates the
CC       repetitive C-terminus of RNA polymerase II. Catalytic component of
CC       MPF (By similarity).
CC   -!- SUBUNIT: Forms a stable but non-covalent complex with cyclin B in
CC       mature oocytes (By similarity).

RT and a novel alanine insertion specific to goats and sheep in the
RT kinase insert region.";
RL Biochim. Biophys. Acta 1352:151-155(1997).
CC -!- FUNCTION: This is the receptor for stem cell factor (mast cell
CC growth factor). It has a tyrosine-protein kinase activity. Binding
CC of the ligands leads to the autophosphorylation of KIT and its
CC association with substrates such as phosphatidylinositol 3-kinase
CC (Pi3K).
CC -!- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + a protein
CC tyrosine phosphate.
CC -!- SUBUNIT: Interacts with APS and MPDZ (By similarity).
CC -!- SUBCELLULAR LOCATION: Type I membrane protein.
CC -!- SIMILARITY: Belongs to the Tyr protein kinase family. CSF-1/PDGF
CC receptor subfamily.
CC -!- SIMILARITY: Contains 5 Ig-like C2-type (immunoglobulin-like)
CC domains.

RA   Kubota T., Hikono H., Sasaki E., Sakurai M.;
RT   "Sequence of a bovine c-kit proto-oncogene cDNA.";
RL   Gene 141:305-306(1994).
CC   -!- FUNCTION: This is the receptor for stem cell factor (mast cell
CC       growth factor). It has a tyrosine-protein kinase activity. Binding
CC       of the ligands leads to the autophosphorylation of KIT and its
CC       association with substrates such as phosphatidylinositol 3-kinase
CC       (Pi3K).
CC   -!- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + a protein
CC       tyrosine phosphate.
CC   -!- SUBUNIT: Interacts with APS and MPDZ (By similarity).
CC   -!- SUBCELLULAR LOCATION: Type I membrane protein.
CC   -!- SIMILARITY: Belongs to the Tyr protein kinase family. CSF-1/PDGF
CC       receptor subfamily.
CC   -!- SIMILARITY: Contains 5 Ig-like C2-type (immunoglobulin-like)
CC       domains.

RT   region in canine mast cell neoplasms.";
RL   J. Invest. Dermatol. 112:165-170(1999).
CC   -!- FUNCTION: This is the receptor for stem cell factor (mast cell
CC       growth factor). It has a tyrosine-protein kinase activity. Binding
CC       of the ligands leads to the autophosphorylation of KIT and its
CC       association with substrates such as phosphatidylinositol 3-kinase
CC       (Pi3K).
CC   -!- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + a protein
CC       tyrosine phosphate.
CC   -!- SUBUNIT: Interacts with APS and MPDZ (By similarity).
CC   -!- SUBCELLULAR LOCATION: Type I membrane protein.
CC   -!- SIMILARITY: Belongs to the Tyr protein kinase family. CSF-1/PDGF
CC       receptor subfamily.
CC   -!- SIMILARITY: Contains 5 Ig-like C2-type (immunoglobulin-like)
CC       domains.

CC   -!- FUNCTION: This is the receptor for stem cell factor (mast cell
CC       growth factor). It has a tyrosine-protein kinase activity. Binding
CC       of the ligands leads to the autophosphorylation of KIT and its
CC       association with substrates such as phosphatidylinositol 3-kinase
CC       (Pi3K).
CC   -!- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + a protein
CC       tyrosine phosphate.
CC   -!- SUBUNIT: Interacts with APS. Interacts with the tenth PDZ domain
CC       of MPDZ.
CC   -!- SUBCELLULAR LOCATION: Type I membrane protein.
CC   -!- DISEASE: Defects in KIT are a cause of piebaldism [MIM:172800].
CC       Piebaldism is an autosomal dominant genetic developmental
CC       abnormality of pigmentation characterized by congenital patches of
CC       white skin and hair that lack melanocytes.
CC   -!- DISEASE: Defects in KIT are a cause of gastrointestinal stromal
CC       tumor (GIST) [MIM:606764].
CC   -!- SIMILARITY: Belongs to the Tyr protein kinase family. CSF-1/PDGF
CC       receptor subfamily.
CC   -!- SIMILARITY: Contains 5 Ig-like C2-type (immunoglobulin-like)
CC       domains.
CC   -!- DATABASE: NAME=Atlas Genet. Cytogenet. Oncol. Haematol.;
CC       WWW="http://www.infobiogen.fr/services/chromcancer/Genes/KITID127.html".

RESULT 1
US-08-168-917-4
; Sequence 4, Application US/08168917
; Patent No. 5686572
;  GENERAL INFORMATION:
;    APPLICANT:  Wolf, David
;    APPLICANT:  Tomlinson, James E.
;    APPLICANT:  Fretto, Larry J.
;    APPLICANT:  Giese, Neill A.
;    APPLICANT:  Escobedo, Jaime A.
;    APPLICANT:  Williams, Lewis T.
;    TITLE OF INVENTION:  DOMAINS OF EXTRACELLULAR REGION OF HUMAN
;    TITLE OF INVENTION:  PLATELET-DERIVED GROWTH FACTOR RECEPTOR POLYPEPTIDES
;    NUMBER OF SEQUENCES:  23
;    CORRESPONDENCE ADDRESS:
;      ADDRESSEE:  TOWNSEND and TOWNSEND
;      STREET:  Steuart Street Tower, 20th Floor \ One Market
;      STREET:  Plaza
;      CITY:  San Francisco
;      STATE:  California
;      COUNTRY:  US
;      ZIP:  94105
;    COMPUTER READABLE FORM:
;      MEDIUM TYPE:  Floppy disk
;      COMPUTER:  IBM PC compatible
;      OPERATING SYSTEM:  PC-DOS/MS-DOS
;      SOFTWARE:  PatentIn Release #1.0, Version #1.25
;    CURRENT APPLICATION DATA:

US-10-450-763-51112
; Sequence 51112, Application US/10450763
; Publication No. US20050196754A1
; GENERAL INFORMATION:
; APPLICANT: Hyseq, Inc
; TITLE OF INVENTION: NOVEL NUCLEIC ACIDS AND POLYPEPTIDES
; FILE REFERENCE: 790CIP3/US
; CURRENT APPLICATION NUMBER: US/10/450,763
; CURRENT FILING DATE: 2003-06-11
; PRIOR APPLICATION NUMBER: PCT/US01/08631
; PRIOR FILING DATE: 2001-03-30
; PRIOR APPLICATION NUMBER: 09/540,217
; PRIOR FILING DATE: 2000-03-31
; PRIOR APPLICATION NUMBER: 09/649,167
; PRIOR FILING DATE: 2000-08-23
; NUMBER OF SEQ ID NOS: 60736
; SOFTWARE: Custom
; SEQ ID NO 51112
; LENGTH: 1089
; TYPE: PRT
; ORGANISM: Homo sapiens
; FEATURE:
; NAME/KEY: DOMAIN
; LOCATION: (592)..(641)
; OTHER INFORMATION: Receptor tyrosine kinase class III proteins domain identified
; OTHER INFORMATION: by eMATRIX, accession number BL00240C, p-value=1.000e-40, raw
; OTHER INFORMATION: score of 22.58
; FEATURE:
; NAME/KEY: DOMAIN
; LOCATION: (600)..(955)
; OTHER INFORMATION: Eukaryotic protein kinase domain identified by PFam,
; OTHER INFORMATION: accession name pkinase, E-value=3e-74, PFam score of 260.1

RESULT 5
AX330200
LOCUS AX330200 6378 bp DNA linear PAT 09-JAN-2002
DEFINITION Sequence 709 from Patent WO0194629.
ACCESSION AX330200
VERSION AX330200.1 GI:18103178
KEYWORDS .
SOURCE Homo sapiens (human)
ORGANISM Homo sapiens
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini;
Hominidae; Homo.
REFERENCE 1
AUTHORS Young,P.E., Augustus,M., Carter,K.C., Ebner,R., Endress,G.,
Horrigan,S., Soppet,D.R. and Weaver,Z.
TITLE Cancer gene determination and therapeutic screening using signature
gene sets
JOURNAL Patent: WO 0194629-A 709 13-DEC-2001;
Avalon Pharmaceuticals (US)
FEATURES Location/Qualifiers
source 1. .6378

RESULT 7
HUMPDGFRAA
LOCUS HUMPDGFRAA 6378 bp mRNA linear PRI 11-APR-1996
DEFINITION Human platelet-derived growth factor receptor alpha (PDGFRA) mRNA, complete cds.
ACCESSION M21574
VERSION M21574.1 GI:189733
KEYWORDS platelet-derived growth factor receptor.
SOURCE Homo sapiens (human)
ORGANISM Homo sapiens
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini; Hominidae; Homo.
REFERENCE 1 (bases 1 to 6378)
AUTHORS Matsui,T., Heidaran,M., Miki,T., Popescu,N., La Rochelle,W., Kraus,M., Pierce,J. and Aaronson,S.
TITLE Isolation of a novel receptor cDNA establishes the existence of two PDGF receptor genes
JOURNAL Science 243 (4892), 800-804 (1989)
PUBMED 2536956
COMMENT Original source text: Homo sapiens cDNA to mRNA.
Draft entry and computer-readable sequence for [1] kindly submitted by S.Tronick, 29-NOV-1988.

RESULT 10
AR036472
LOCUS AR036472 6375 bp DNA linear PAT 29-SEP-1999
DEFINITION Sequence 5 from patent US 5872218.
ACCESSION AR036472
VERSION AR036472.1 GI:5953140
KEYWORDS .
SOURCE Unknown.
ORGANISM Unknown.
Unclassified.
REFERENCE 1 (bases 1 to 6375)
AUTHORS Wolf,D., Tomlinson,J.E., Fretto,L.J., Giese,N.A., Escobedo,J.A. and Williams,L.Thomas.
TITLE Human platelet-derived growth factor receptor extracellular domain antibodies
JOURNAL Patent: US 5872218-A 5 16-FEB-1999;
FEATURES Location/Qualifiers
source 1. .6375
/organism="unknown"
/mol_type="unassigned DNA"
